

Collection and Recycling system in **Spain**

José Maldonado Head of Recycling Managing Department 14th june 2023

Ecoembes in numbers

Recycling System Scheme

The packagings are **designed**, **manufactured and distributed** by the companies that have the legal responsibility of financing the municipalities for their selective collection once they become waste.

The packaging is recycled and transformed into **raw material** again in order to close the life cycle of the packaging.

5

4

The packaging is selected in the plants and taken to the approved recyclers for their correct recycling.

The packaging is separated after consumption in the yellow and blue containers for subsequent selective collection and recycling.

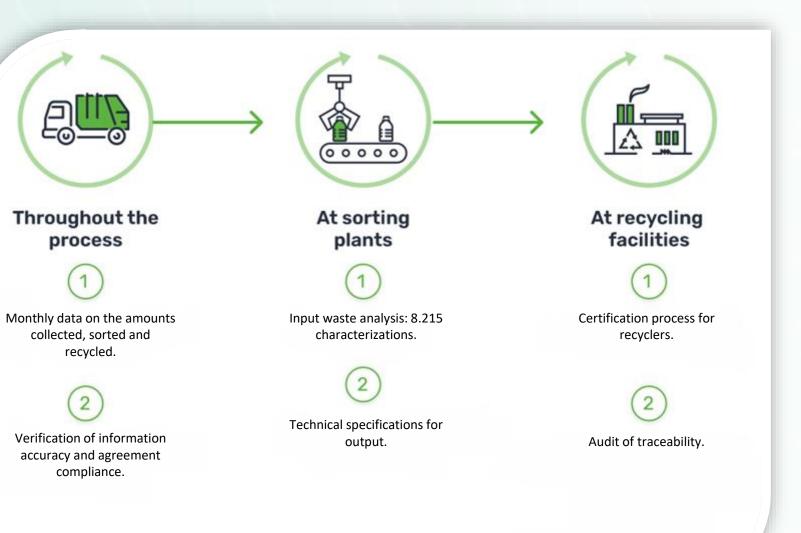

2

3

The packaging **is collected** by local entities and is taken to the selection plants.

Recycling process – Control and traceability

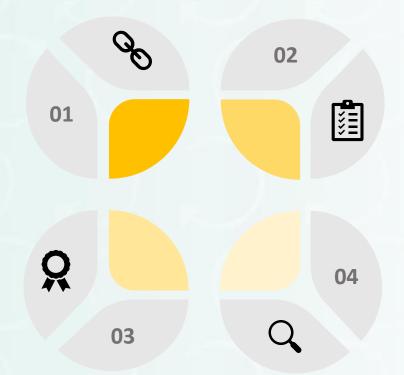

The entire recycling chain

At Ecoembes we work from the packaging collection to final recycling, going through the sorting plants, focusing on the citizen as the key that keeps the entire chain moving.

The award process

Is an open procedure, in which any certified recycler that proves the technical, environmental, economic and administrative criteria can participate through an auction.

Technical specifications

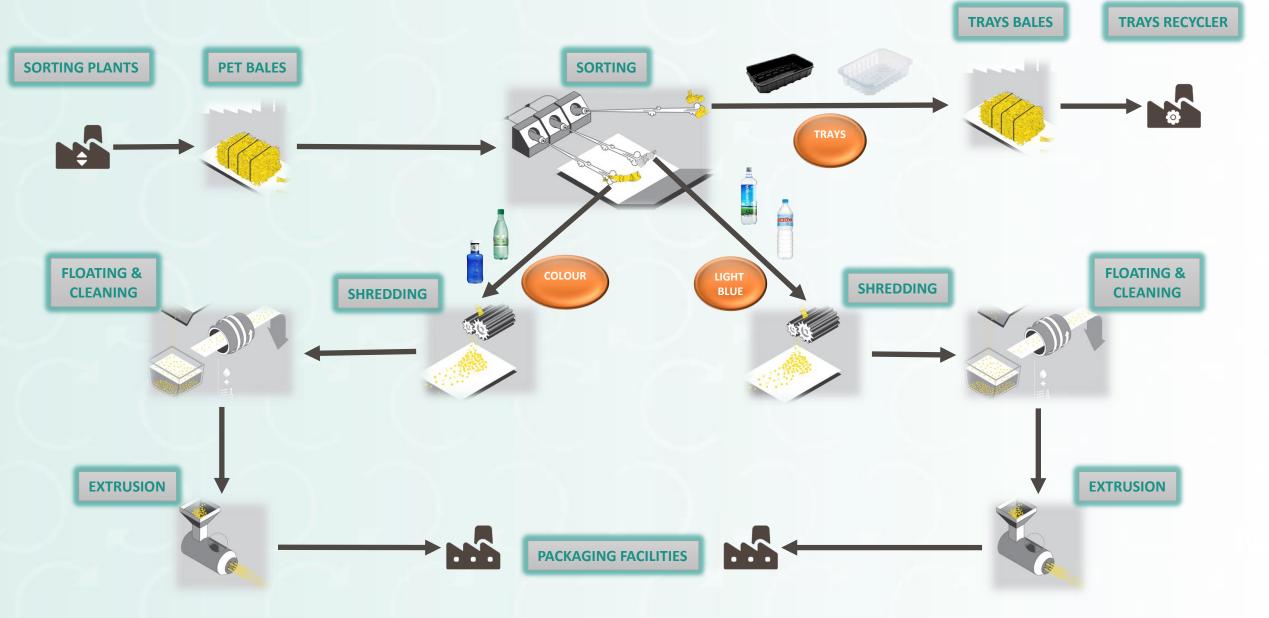

Ecoembes ensures that the quality and quantity of these materials meet the regulatory standards, established in the Agreements signed with the Municipalities.

Traceability control

The recycler that offers the best purchase price is awarded with the material, and Ecoembes carries out a follow-up to ensure the traceability of the material.
